

Northern Bridger Range; south of Frazier Lake

Accident Report

[Northern Bridger Avalanche Oct 2012.pdf](#)

Activity

Skiing

Date

10/27/2012

3 skiers triggered, caught and partially buried; 2 injured

Synopsis

On Sunday, October 28, three male skiers in the northern Bridger Range were ascending a south-facing slope immediately south of Frazier Basin when they triggered an avalanche. All three were partially buried. Two were injured. The avalanche was estimated to be three feet deep, 100 feet wide and ran approximately 600 feet vertical. US classification is SS-AS-U, R2, D2.
