Wet Loose in Beehive

Date
Fri, 04/05/2024 - 12:40
Activity
Skiing

Toured into Beehive Basin on 04/05/2024. Light freeze overnight ~0.5" crust with wet snow below on most slopes. Treed areas did not freeze. Clouds along with a cold south wind kept many slopes from softening. By 11:30 sunny slopes below 9000' had become wet and made for poor ski conditions. Attached are photos of recent loose wet avalanches that likely happened 24-48 hours ago. All attached photos on SW-W aspects at ~9800'

Region
Northern Madison
Location (from list)
Beehive Basin
Observer Name
Zach Peterson
