2023-24 Season Snowpack Summary

Submitted by Alex Marienthal on Thu, 08/01/2024 - 16:57

The snowpack was historically low from when we started forecasts on December 7th through the beginning of February. We had long dry spells interrupted by a couple “storm cycles”. Snowfall was minimal with 1-2” of SWE over a week in December, and 2-4” of SWE over 2-3 weeks in January. That was enough to create a slab and widespread avalanche activity...
