

The Bridgers got 30-40" of new snow in the past week. It came in warm and dense, and it is bonding well to the old snow. Natural Avalanches broke 6-8" deep in the new snow today. This instability will heal in a day or two. Wind loaded slopes, where new snow is drifted into fresh thick slabs, will be the most likely place to trigger avalanches the next few days. Photo: GNFAC

Advisory Region
Bridger Range
