

# Skier triggered avalanche in Beehive Basin

Beehive Basin  
Northern Madison  
1/22/2019  
Code  
SS-ASu-R2-D2-I  
Elevation  
9000  
Aspect  
NE  
Aspect Range  
ENE  
Latitude  
45.34220  
Longitude  
-111.39700  
Notes

From an email:

"Dug a pit at ~9000' on a NE [aspect](#), got a ECTP29 at 56cm down, breaking below the new snow and a 12cm knife-hard [slab](#). Broke on small facets (<1mm) in between wind slabs. I marked the [trigger point](#) in red. Skinned up a low angle gully up to around 9500'. As I got near the steepest part of the gully (38°), a soft [slab](#) 12-18" thick propagated 100' wide and slid 500' back down to my pit. No one was caught. Contrary to my pit, this ENE [aspect](#) slid just the new snow on top of a previous [wind slab](#). No facets on the [bed surface](#), just new snow/old snow interface. Found safer skiing down low in the trees where there was less [wind loading](#)."

Number of slides
