## Natural new snow slab avalanches, Cooke

Mt. Zimmer Cooke City 3/15/2020 Code SS-N-R2-D1.5-S Elevation 10000 Aspect Range All Latitude 45.11700 Longitude -109.89300 Notes

From e-mail on 3/15/20: "At around 1230pm today, everything that was steeper than 35 degrees in star Creek simultaneously slid on east, north, south aspects. Soft <u>slab</u> 6-12" in thickness. Prior to that, it had been snowing S5 for three hours"

Another email 3/15/20: " observed a round of natural <u>slab</u> avalanches today, that seemed to run at about noon today on the north aspects of Mt. Republic. One was a couple hundred feet wide, and looked to happen within the new snow (6"? deep crown), but it stepped down to what appeared to be the new/old snow interface in a couple of spots as well. Significantly wide <u>propagation</u> and deep debris piles. The snow on Town Hill was cracking a lot early in the day around your skis, but seemed to settle relatively quickly,
