Skier triggered slough on Black Mtn (Absarokas)

Black Mountain Out of Advisory Area 4/1/2022 Code L-AS-R2-D1.5 Latitude 45.16280 Longitude -111.52900 Notes

Observation from the Y-couloir on Black Mountain in the Absarokas (outside of the advisory area) 4/1/22:

"Crown was 4-6" deep, approximately 30' across (just shy of the width of the <u>couloir</u>). Ran the length of the <u>couloir</u> (~700'). Layer that slid consisted of new, unconsolidated snow. The <u>slide</u> was skier-triggered, skier stayed on his feet as it ran by them. We dug a pit beforehand on a similar <u>aspect</u> and got ECTPN. New snow concerns matched that of the forecast for today."

Number of slides 1 Number caught 0 Number buried 0 Avalanche Type Loose-snow avalanche Trigger Skier R size 2 D size 1.5 Slab Thickness units centimeters Single / Multiple / Red Flag Single Avalanche Advisory Year 21-22
