Activity

Skiing

Fabulous day skiing north of Frazier Basin. East and south aspects had thick supportable crust below 6-15" of new. Bonded well, some sluffing on steeper slopes. Entertained skiing a steeper north facing line but backed off after digging. Pit on 34 deg North facing slope, 250cm snow. ECTP 21 high energy Q1 shear about 2 1/2 down, well developed facets below thin (N. facing) ice crust.

Thanks for all you do!!

Region

Bridger Range
