

Avalanche on Saddle Peak

Saddle Peak

Bridger Range

2/10/2024

Code

L-N-R1-D1-S

Latitude

45.79430

Longitude

-110.93600

Notes

From obs: "Witnessed a natural [slide](#)/sluff today day off the top of 1/4 Saddle around 3:30 pm from the Bitterend. Visibility was poor could not see the starting point. The [slide](#) produced a large dust cloud running down the right side of the Football field, which would could have taken a person for a ride. The [slide](#) ran over the cliffs skiers left of Lundy's Luge. The debris covered all the tracks the from the high traverse across the Cueball. Probably would not have buried a person, but certainly would have rocked your world."

Number of slides

1

Number caught

0

Number buried

0

Avalanche Type

Loose-snow avalanche

Trigger

Natural trigger

R size

1

D size

1

Bed Surface

S - Avalanche released within new snow

Problem Type

Loose Dry

Snow Observation Source

[Avalanche](#)

Slab Thickness units

centimeters

Single / Multiple / Red Flag

Single Avalanche

Advisory Year

[23-24](#)
