

Wind slabs, cornice formation on Mt. Blackmore

Date

Mon, 02/17/2025 - 07:35

Activity

Skiing

2/17 Immediately noticed signs of wind loading and wind slabs on NE-E aspects once in the basin. New cornices have formed in the last couple days along the North ridge to the summit. Cornice collapse on the summit triggered a small wind slab on an isolated slope.

Region

Northern Gallatin

Location (from list)

Mt Blackmore
